

MACHINE-BUYER CONFORMANCE SUMMARY

Forest Lantern

https://barebonesliving.com/products/forest-lantern

TESTED	REQUIREMENTS	STATED ON THE PAGE	NOT STATED
2026-07-26	8	5	3
CONTRACT generated buyer task (no published standard covers this product)			

What this is. An AI shopping assistant reading this product page can only use what the page actually states in a machine-readable form. Each requirement below is a question a buyer asks; the test reports whether the page answers it, and quotes the sentence that did. **“Not stated” is a statement about the page, not about the product.** It does not mean the product lacks the property, and nothing here is a criticism of it.

The 3 most material findings

Selection rule: unmet requirements first, ranked by how many comparable stores DO state the same thing (the widest peer gap first); where two are equal, the one a stranger can check on the fewest surfaces comes first. Nothing here is hand-picked.

FINDING 1 · NOT STATED ON THE PAGE

Product identifier (GTIN or MPN) is published

Your product structured data publishes no GTIN or MPN, so a machine buyer can't match this product to a catalogue entry.

Check it: Open https://barebonesliving.com/products/forest-lantern and look at structured data. The claim is that nothing there settles this question — one sentence anywhere on those surfaces would.

FINDING 2 · NOT STATED ON THE PAGE

Materials are stated

Checked product copy, structured data, product title, variant options and page description — no statement of what this product is made of that an AI buyer could read.

Check it: Open https://barebonesliving.com/products/forest-lantern and look at product copy, structured data, product title, variant options, page description. The claim is that nothing there settles this question — one sentence anywhere on those surfaces would.

FINDING 3 · NOT STATED ON THE PAGE

Measurements are stated

Checked product copy, structured data, product title, variant options and page description — no readable measurements — size, capacity, weight or fit.

Check it: Open <https://barebonesliving.com/products/forest-lantern> and look at product copy, structured data, product title, variant options, page description. The claim is that nothing there settles this question — one sentence anywhere on those surfaces would.

Provenance

- Full result, permanent and unchanging: http://127.0.0.1:8787/result/t_cd29c6b169d53519c10f
- Method: <http://127.0.0.1:8787/methodology>
- Engine **v2.4.0**

This run used the general engine, not a published standard. The measured false-pass rates we publish are measured while executing a standard on its own category, so none is quoted here: it would attribute a measurement to a different thing than the one that produced this page.

The store did not ask for this test and has no involvement in it. The page may have changed since 2026-07-26; the permanent link above states the date it was read.
